BURPEE'S TWO LOVELY NEW GIANT SWEET PEAS FOR 1935

3448 Pacific

A charming Sweet Pea of outstanding warm color—deeper fawn-pink lightly suffused and blended with coral-pink. A pleasing glow of amber adds considerably to the color value. The wings are pink about two shades lighter—a glorious blending of luminous golden pink and wild rose. The keel is creamy amber faintly marked with golden rose, which is carried well up into the wings. It was given the Award of Merit, National Sweet Pea Society Trials in 1932.
Pkt. 25c

3550 Daylight

The color is a glorious primrose-pink brightened by tones of coral or peachbloom-pink changing to Orient pink at the edge of the petals; the base of the petals as well as the keel are a rich yet soft cream. A suggestion of gold throughout is most pronounced on the back of the standard. A warmth and pleasing glow is given to the flowers by these rich tones of pink and gold in both the standard and wings. The flowers are large, of heavy substance and placed artistically in fours on long stems.
Pkt. 25c

Burpee's Ruffled Sweet Peas

FLUFFY RUFFLES: This was the first Ruffled Sweet Pea introduced by Burpee. As the name suggests, the flowers resemble large fluffy balls of ruffles. The color is a most exquisite cream-pink of remarkable purity and softness. Forms elegant four flowered sprays.
Pkt. 10c.

RUFFLED BEAUTY: Lovely, large, exquisitely ruffled, cream-pink blooms with a sheen of bright lilac, giving it a particularly charming effect of silvery pink over amber. Very outstanding.
Pkt. 10c.

RUFFLED ORCHID: The beautiful lavender-pink blooms have a substantial pastel-mauve sheen which adds warmth to the color and makes it particularly appealing. The blooms are large and show an exquisite ruffling. They are arranged on fine long stems.
Pkt. 10c.

RUFFLED ROSE: A graceful rose-colored Sweet Pea representing a shade which is extremely popular as it is neither weak nor harsh. The blooms are well formed and show a liberal amount of ruffling and doubling. They are borne in fours on elegant large stems.
Pkt. 10c.

LADY RUFFLES: A beautiful soft pink self on a white ground. The warm glow of color runs well down to the base of the standard and wings. Extremely strong growing with four large ruffled flowers on stout stems. Lasts well when cut.
Pkt. 10c.

RUFFLED CARMINE: A beautiful flower of good substance, carrying four large blooms on each stem. A lovely carmine-rose of remarkable brightness, yet entirely free from any harshness and glare. Always well frilled and refined.
Pkt. 10c.

RUFFLED PRIMROSE: Flowers of bewitching beauty, exquisitely ruffled, well rounded, and large. The color is a warm shade of cream, having a mellowness that will make it a great favorite with many. Though it is dark seeded, the flowers are free from any pink hue or blush.
Pkt. 10c.

BLUE

Reflection: This fine new English variety represents a lovely true mid-blue color of remarkable purity.

BLUE (NAVY)

The Flag Lieutenant: The color of this splendid Sweet Pea is a rich navy blue.

BLUE (VIOLET)

Commander Godsall: An attractive shade of deep violet-blue, going well with the massive bloom.

CERISE (DEEP)

Royal Salute: Sunproof scarlet cerise.

CERISE (SALMON)

Mrs. A. Searles: Bright orange-cerise blooms with a distinctly golden sheen. Of wonderful size and strong constitution.

CERISE (SCARLET)

Flamingo: Bright orange-scarlet shaded with cerise. Absolutely sunproof and reliable. An exceptionally strong grower of a color that has many admirers.

CREAM

What Joy: One of the best and newest of the cream varieties. A rich deep primrose-yellow shade.

CREAM PINK

Mary Pickford: Dainty cream pink, suffused salmon, very large.

CRIMSON

Sybil Henshaw: Crimson lake, very large. This new variety has features which place it above most others.

LAVENDER

Ambition: A new lavender, perfectly distinct, with a darker shade on the base of the standard and wings when young. Has all the points of a first class pea. Very long flower stems, each bearing four or five enormous flowers beautifully waved and perfectly placed.

LAVENDER (LILAC)

Powercourt: Many gardeners' choice as the best pure lavender of medium color intensity.

LAVENDER (ROSY)

Austin Frederick Improved: A lavender shade which is bright and pleasing. Well shaped, large blooms artistically arranged in fours on a long stem.

MAROON (DARK)

The Sultan: Rich velvety maroon flowers free from any undesirable purplish or rusty shadings.

MAUVE

Chieftain: A Gold Medal Sweet Pea with large blooms of a pure satiny mauve color. Exceptionally fine.

ORANGE

Colorado: An orange color in all its purity and richness. It gives a dazzling effect.

ORANGE (DEEP)

Orange Picture: Rich pure orange.

ORANGE (SCARLET)

Gloriosa: The combination of orange and scarlet as exhibited in this splendid sweet pea is undefinably beautiful. A glorious large flowered variety.

PINK (DEEP)

Pinkie: A clean clear pink that defies description. The large, well-formed blooms are carried in fours on a fine long stem.

GIANT SPENCER SWEET PEAS (Continued)

PINK (PALE)

Ascot: A favorite with many flower growers, who appreciate the lovely and tender pink color of the flowers.

PINK (SALMON)

Floradale: A new salmon pink on a cream ground—an unusually rich and pleasing color. Where the sun is less intense, the color is somewhat richer—more of a salmon-cherise. Long, strong stems, each bearing four very large, filled blooms, many of which are exquisitely duplexed.

Miss California: An artistic tone of cream-pink with a hue of salmon—a wonderful color combination.

PURPLE

Olympia: Lovely large blooms of a glorious rich and bright purple color. Very vigorous and free blooming.

ROSE (CARMINE)

Damask Rose: A truly exquisite flower of a beautiful rosy crimson shade. Of splendid formation, carrying four blooms on each spray.

SALMON

Barbara: Glistening pure salmon blooms of exquisite texture. The color is best if slightly shaded.

SCARLET

Welcome: A really sun proof vivid deep scarlet self. Excels for garden decoration and cutting.

Campfire: Bright scarlet, sun proof.

WHITE

Avalanche: A beautiful pure white flower of lovely texture. The magnificent blooms are well waved.

Culture of Sweet Peas

CULTURE. Sweet Peas require good soil and plenty of water. On Puget Sound they may be planted in October, for early spring flowering. Most seasons they come through without any protection, but a few inches of straw placed on the row will insure sufficient protection against the frosts usually experienced here. Plant in the Spring as early as the ground can be worked.

The best method of planting is to dig a trench 12 to 18 inches deep. If the soil is not good, remove the poor soil and replace with a good quality, using plenty of fertilizer, which should be well mixed with the soil, filling up the trench to within three or four inches of the top. On top of this mixture of soil and fertilizer, place about one inch of good mellow soil without any manure or fertilizer in it, on which to sow the seed. Cover the seed one-half to one inch with soil, a half inch being preferable. The trench should always be kept open an inch or two from the top in order that water used will lead to the plants. Sweet Peas require more moisture than most other plants, and whenever it is necessary to water them, soak them thoroughly. When the seeds are well up, thin them out and when grown to one or two inches, fill in some more soil around them.

When the Peas are in bloom they should, unless grown for seed, be cut every day. If this is done they will produce better blooms on longer stems and blossom profusely all through the season.

One ounce will plant a 10 to 15 foot row.

A MALMO & CO. LAWN GRASS SEED

FOR ANY AND EVERY LOCATION

SINGLE—Scarlet, Pink, Salmon, Crimson, Yellow.

10c each; 3 for 25c

There are few plants that are more easily grown than the Begonia. They should be started indoors during February and set out as soon after danger of frost as possible. They may be planted outdoors with perfect safety after May 1. Bulbs should be lifted after first frost each year.

GLADIOLUS

CULTURE OF GLADIOLUS BULBS

Plant in the spring in thoroughly prepared good garden soil to insure the acme of results. Good quality flowers may be produced in almost any soil but the size depends largely on the amount of fertilizer used. To insure continuous blooming until frost successive plantings at fifteen days intervals should be made. The bulbs may be lifted for storing only after the tops have turned completely brown.

HARDY LILIES

LILY CULTURE

Lilies planted out of doors during the fall or early spring will flower in succession each year from June to October. They will increase in size, beauty and number of flowers as our Coast climate is perfectly suited to their requirements. They do best in the hardy border for the reason that the flowering stems bear masses of roots immediately below the ground surface and the shady situation helps these roots to better feed the plants. In planting use any good garden soil but good drainage is essential. Cover the bulbs at least to their own depth, and, if possible, spread one inch of sharp sand under the base, so that after the bulbs make basal roots the sand will provide drainage in winter.

2 oz. can 50c; 4 lb. can \$2.50

TO PREVENT PEACH LEAF CURL OR BLIGHT

Spray with Bordeaux Mixture just before leaf buds break in spring. Select day when spray will dry on tree, if possible, using strength as shown on container for dormant spraying, usually 8 to 12 tablespoons to gallon of water. Keep spray mixture agitated while spraying, as Bordeaux will not remain in suspension otherwise.

Spraying must be done just before leaf buds break, as later spraying will be ineffectual. Curl Leaf being caused by minute fungi which settle on branches and buds during fall and winter, but which do not have strength enough to penetrate tough outer skin of buds, immediately shooting their roots into the tender leaves as soon as the outer skin breaks. After fungi have attacked leaves, any spray strong enough to destroy the fungi will also kill the leaves.

UNION GARDEN SPRAY

Union Garden Spray is a clear fluid. An 8 ounce bottle will make five to eight gallons of spray recommended for use against Aphids, Scale (Red Black Purple), Mealy Bug, Thrips, Red Spiders, White Flies and similar pests. When sprayed on foliage it thoroughly "wets" the insects with which it comes in contact. Price, 50c

UNION GARDEN SPRAYER

To get the best results in applying the garden spray emulsion use a Union Garden Sprayer. It builds up a continuous pressure, thereby reducing many times the effort required as compared with the ordinary sprayers. When an emulsion of Union Garden Spray is used, this sprayer produces a dense mist that thoroughly wets the foliage and insects. The sprayer is equipped with a drawn brass nozzle that will not rust and is easily cleaned. It is also heavily constructed throughout. The container holds approximately a pint of emulsion. For greatest ease of application, fill the container about half full.
